Example

Here is an example using `all.bib` with BibLATEX.

Some example citations: classics like Chomsky (1957), Estes and Suppes (1959), Kolmogorov (1968), and Tesnière (1959), and newer works like Lew et al. (2022) and Tay et al. (2022).

Note: I also have `all-biblatex.bib`, which complies with the format recommendations for BibLATEX. I'll update that periodically. But I'll use the file `all.bib` as the default, which is in old BibTEX format (for compatibility). In practice, this means it has year *instead of* date *fields, and uses no Unicode characters, etc.*
